

BA STUDIO

infinite possibilities

BA Studio is a Business Application Development platform that covers the entire life-cycle of business application and business process. This can be used to model, manage, develop and deploy Enterprise grade end-to-end business applications. Applications generated by BA Studio have a rich user interface which can be deployed in Desktop, Web or Cloud environment.

BA Studio enables business domain experts to easily build professional-quality line-of-business applications without focusing on writing code. By creating the model first, user feedback is incorporated early, rapidly and continuously to maximize production and customer satisfaction.

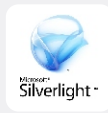

FEATURES

Rich Modeling Tool:

Rich designer set that includes Schema Designer, Form Designer, View Designer & Report Designer.

Multi platforms:

Generates Silverlight application which can run on desktop, web or cloud either windows or mac.

Database:

Supports SQL Server / Oracle / MySQL databases.

Workflows:

Supports Built-in workflow.

User Interface:

Uses RIA (Microsoft Silverlight) which delivers rich interface on the web.

Extensible:

Offers extended support to additional DSLs.

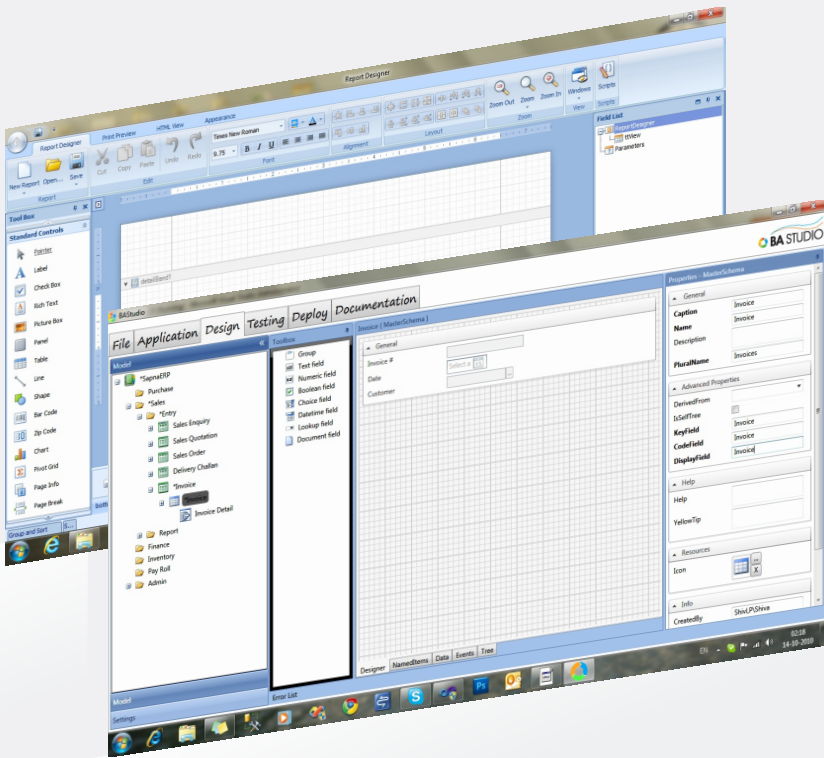

Integration:

Exposes functionality as web service; third party application can use these services for integration.

BENEFITS

- Develop high-performance, cost-effective applications quickly and easily
- Increased quality with reduced development time and total cost
- Cut-rate the conventional development course, accelerate time-to-market
- Simultaneously develop applications for both windows and web

Deployment:

With built-in component for deployment, deploys the database and application with pre-requisites.

Version Control:

With the built-in version control, allows multiple configurators to share same solution. It also allows them to revert to any version in the history.

Performance:

Uses several best practices like server side paging, caching etc., to achieve the better performance.

Scalability:

Uses SOA architecture, which can be easily scaled out to multiple servers based on the requirement.

Access Control:

Supports role based security access; each role can be set with menu permission and access rights.

Documentation:

Generates system documentation by click of the button.

Localization:

Supports Application and Data localization in multiple locales where user can enter data in different languages.

“ We are the largest producer of vegetable seeds. Ours is a very complex business system of production where our own farms and farmers as contractors are used. We had bad experience of using standard product to streamline the business process, wasting more time and money, which had to be discarded finally. We chose BA Studio to develop tailor made solution from ground zero and it proved us the wonders of realizing an integrated solution in just 5 months and saving money. I am excited about the power of BA Studio that made us to see the solution quicker than a ready product can offer. ”
