- **Performance**
- **Scalability**
- **Access Control**
- **Security**

Business Application Studio (BAStudio) is a Business Application platform that covers the entire life-cycle of business application and business process. This can be used to model, manage, develop and deploy SOA based Enterprise grade end-to-end business applications. BAStudio generates applications with rich user interface that can be deployed in Desktop or Web environment. BAStudio facilitates to develop the application faster and fluid with best visual interface that allows the configurator and end-user to perform the task simultaneously. Creating the model and then incorporating the user feedback before deploying the application will maximize productivity and satisfaction of the customers.

BA Studio the solution designed to empower the IT managers, helps to realize the application development is much easier than ever before. With BA Studio, businesses can meet their needs of deploying the application in just few days of normal development cycle which otherwise makes the project running with big challenges of time overrun, resources attrition, long testing cycle and increasing budget. Businesses can create applications now and run it for both Web and Desktop with one time development effort, facilitating early realization on go-to market and cutting the cost.
